EDUCATION

Visvesvaraya Technological University (VTU)

Bachelor of Engineering (B.E.)

CGPA: 8.01 / 10

Relevant Coursework: Java OOP, DBMS, Operating Systems, DSP, Microcontrollers, Data Structures

Belagavi, India

Dec 2021 – May 2025

TECHNICAL SKILLS

- **Languages:** Java, Python, C++, JavaScript, SQL, PostgreSQL.
- **Frameworks:** Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, JSF.
- **Tools:** IntelliJ IDEA, VS Code, DBeaver, Git, GitHub.
- **Other:** Git version control, REST API development, JWT Authentication, Database Optimization .

EXPERIENCE

Software Development Intern

VizionExl Technologies, Vijayapura

June 2025

- Designed and developed RESTful APIs for authentication and data management using Spring Boot and PostgreSQL.
- Built a JWT-based authentication service ensuring secure user management and role-based access control.
- Collaborated with the team to debug and resolve issues, improving API response times and reliability.
- Applied clean code practices and git version control to maintain structured, reusable, and optimized code.

PROJECTS

Library Management System

GitHub

Built a Spring Boot application with PostgreSQL to manage books, users, and lending activities. Implemented features like book search, return tracking, and role-based access for admins and students, ensuring smooth library operations and efficient record management.

Task Management System

GitHub

Developed a backend application using Spring Boot and PostgreSQL to create, assign, and track tasks with deadlines and priorities. Integrated secure authentication with Spring Security, enabling users to manage tasks efficiently while maintaining data integrity.

User Authentication Service

GitHub

Built a standalone authentication service using Spring Boot and JWT to handle secure user registration and login. Implemented password encryption and role-based authorization to protect sensitive endpoints and ensure secure access control.

Learner Management System

GitHub

Developed backend services using Spring Boot and PostgreSQL to manage student enrollment, course tracking, and progress analytics. Exposed REST APIs to support admin dashboards and ensure accurate, consistent learner data across the system.

Restaurant Management System

GitHub

Developed a backend application using Spring Boot to manage restaurant operations, including menus, orders, billing, and reservations. Implemented PostgreSQL for reliable data storage and ensured smooth handling of customer and order information, improving overall efficiency.
